## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 41 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The new limitation requiring the axis of the auger to be parallel to the hitch is not supported by the original disclosure. Oppositely, as clearly depicted in Figs. 1-3, the hitch is perpendicular to the axis of rotation of the auger. Therefor, they can not both be parallel to a direction of movement of the mixing apparatus. For example, if a tractor were pulling the apparatus by the hitch, while the hitch would be parallel to the direction of movement, the axis of rotation of the auger would be perpendicular to the direction of movement.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 41 is rejected under 35 U.S.C. 102(b) as being anticipated by EP 0 706 755. EP ('755) discloses a mixer apparatus comprising a container (8) including a housing (in which 4 and 10 are located; see for example Fig. 2); a wall (11) extending away from the housing and defining an opening remote from the housing (see Figs. 1

Art Unit: 1723

and 2); auger (6) disposed within the enclosure having a vertical axis of rotation extending through the housing, the auger including a core and flighting (7), said flighting including first and second staggered portions (see for example Figs. 9 and 10). As seen in Figs. 9 and 10, the axis of rotation of the auger (6) and a hitch (2) are oriented in the exact same manner as those of the instant invention as seen in, for example, instant Figs. 1-4 and 15.

### ***Response to Arguments***

5. Clearly, in an attempt to avoid the prior art, applicant has claimed the opposite of his own invention. As seen in instant Figs. 1-3, the axis of rotation of the auger is perpendicular to the hitch and intended direction of movement of the apparatus, not parallel thereto.

6. As seen in Figs. 9 and 10 of EP 706 755, the auger axis and hitch of this prior art reference are arranged in the exact same manner as the auger axis and hitch of the instant invention.

### ***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1723

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
